

PRODUCT INFORMATION SHEET
 Monoclonal antibodies detecting human antigens

CD64

PURE	ASR	REF	IQP-569P	▼	100 tests
FITC	ASR	REF	IQP-569F	▼	100 tests
R-PE	ASR	REF	IQP-569R	▼	100 tests

ASR Analyte Specific Reagent, analytical and performance characteristics are not established. The product comply with the ASR definitions of the U.S. Food & Drug Administration (FDA).

Description

Clone 32.2
Isotype Murine IgG1

Specificity

CD64 reacts with the Fc gamma receptor 1 (FcγR1), a glycoprotein with a molecular weight of 72kDa. The antigen is a high-affinity receptor for IgG and is able to bind human IgG1 and IgG3. The antigen is expressed on macrophages, monocyte and interferon γ (IFN-γ) and Granulocyte Colony Stimulating Factor (G-CSF) stimulated neutrophils. The antibody binds to a CD64 epitope distinct from the ligand-binding site and from the clone 22 antibody to CD64 epitope. It shows especially high affinity binding to human mononuclear phagocytes and polymorponuclear leukocytes exposed to IFN-γ or G-CSF. Its binding is not blocked in the presence of human IgG or immune complexes.

Application Flow Cytometry

Representative data

Staining with clone 32.2 (CD64) monoclonal antibodies is illustrated by flow cytometry analysis of blood cells. Direct staining was performed using 10 μl of the FITC-conjugated antibody and 100 μl of blood sample.

Handling and Storage

Antibodies are supplied either as 100 tests per vial (1 ml) for singles. They are supplied in 0.01 M sodium phosphate, 0.15 M NaCl; pH 7.3, 0.2% BSA, 0.09% sodiumazide (NaN₃). Store the vials at 2-8 °C. Monoclonal antibodies should be protected from prolonged exposure to light. Reagents are stable for the period shown on the vial label when stored properly.

Warranty Products sold hereunder are warranted only to conform to the quantity and contents stated on the label at the time of delivery to the customer. There are no warranties, expressed or implied, which extend beyond the description on the label of the product. IQ Products is not liable for property damage, personal injury, or economic loss caused by the product.

Characterization

To ensure consistently high-quality reagents, each batch of monoclonal antibody is tested for conformance with characteristics of a standard reagent. Representative flow cytometric data is included in this data sheet.

Warning All products contain sodium azide. This chemical is poisonous and hazardous. Handling should be done by trained staff only.
